EVALUATION SUBJECT:
WARDFLEX FLEXIBLE FUEL GAS PIPING SYSTEM

1.0 EVALUATION SCOPE

Compliance with the following codes:
- 2012 and 2009 International Fuel Gas Code® (IFGC)
- 2012 and 2009 International Mechanical Code® (IMC)
- 2012 and 2009 International Residential Code® (IRC)
- 2012 and 2009 Uniform Mechanical Code® (UMC)*
- 2012 and 2009 Uniform Plumbing Code® (UPC)*

*Uniform Mechanical Code and Uniform Plumbing Code are copyrighted publications of the International Association of the Plumbing and Mechanical Officials

Compliance with the following standards:
- ASTM E84-2013a, Standard Test Method for Surface burning characteristics for Building Materials

2.0 USES

The Wardflex gas piping system is a flexible fuel-gas piping system for conveying natural or propane gas. The system is intended for installation with fuel gas pressures not exceeding 5 psi (34 kPa), in a manifold-type arrangement and is permitted for installation in plenums. The system is limited to indoor locations and to exterior locations as permitted in IFGC Chapter 4, IRC Chapter 24, IAPMO UMC Chapter 13 and IAPMO UPC Chapter 12, as applicable. The system’s installation consists of individual CSST distribution lines installed within a building, between the fuel gas source, the manifold and the termination outlet fitting or the appliance. Each appliance must be equipped with an accessible shut-off valve located in the same room and within 6 feet (1828.8 mm) of the appliance upstream of the union. CSST, not in contact with the ground but exposed to the outdoors, must be installed in accordance with IFGC Section 404.7, IRC Section G2415.7, IAPMO UMC Section 1312.2, or IAPMO UPC Chapter 12, as applicable. Distribution lines must be protected from physical damage at points of support and when passing through structural members, such as studs, joists, and plates, by the installation of approved, pre-manufactured, mechanical devices, such as striker plates or oversized strip-wound metal conduit. The CSST must be sized in accordance with capacity tables in the manufacturer’s published installation instructions.

The system must be used for low-pressure [below 1/2 psi (3.4 kPa)] and medium-pressure [2 psi (13.8 kPa)]...
equipment applications. Low-pressure applications with system supply pressures below \( \frac{1}{2} \) psi (3.4 kPa) do not require a line regulator. System supply pressures exceeding \( \frac{1}{2} \) psi (3.4 kPa) but less than 2 psi (13.8 kPa) must utilize a line regulator to limit downstream appliance utilization pressure to \( \frac{1}{2} \) psi (3.4 kPa). System supply pressures that exceed 2 psi but that do not exceed 5 psi (34 kPa) must utilize a line regulator to limit downstream appliance utilization pressure to \( \frac{1}{2} \) psi (3.4 kPa), and an additional over-pressure protection device must be installed between the line regulator and the appliance to limit pressure to 2 psi (13.8 kPa). Medium-pressure equipment applications with supply pressures of 2 psi (13.8 kPa) and greater must utilize a line regulator to limit downstream appliance utilization pressure to 2 psi (13.8 kPa).

Supply pressures exceeding 2 psi (13.8 kPa) must be provided with downstream appliance controls rated for the supply pressure, or protection by some other means acceptable to the code official.

### 5.0 CONDITIONS OF USE

The Wardflex Flexible Fuel Gas Piping System described in this report complies with, or is a suitable alternative to what is specified in, those codes listed in Section 1.0 of this report, subject to the following conditions:

5.1 Installation must comply with this report, the manufacturer's published installation instructions and the applicable code. If there is a conflict between the installation instructions and this report, this report governs.

5.2 Installation must be performed by Ward Manufacturing trained and certified installers using the manufacturer's published installation instructions.

5.3 The product must be limited to use with natural or propane gas at operating pressures not exceeding 5 psi (34 kPa). Pressure regulators are required when fuel supply pressures exceed \( \frac{1}{2} \) psi (3.4 kPa).

5.4 The system shall be pressure-tested after installation in accordance with the applicable code.

5.5 An accessible shut-off valve must be located upstream from the union, in the same room and within 6 feet (1828.8 mm) of the appliance it serves.

5.6 Fittings listed for use in concealed spaces are permitted for use in plenum applications.

5.7 The Wardflex flexible fuel gas piping system is manufactured in Lawrence Township, Pennsylvania, under a quality control program with inspections by CSA International (AA-659).

### 6.0 IDENTIFICATION

6.1 Tubing:

Each 2 feet (610 mm) of tube must bear the followings:

- Wardflex name, trademark or symbol
- Part number
- Date code as described in ANSI LC-1/CSA 6.26
- Rated pressure of 5 psi (34 kPa);
- The Equivalent Hydraulic Diameter (EHD);
- The words “FUEL GAS”;
- Name or symbol of the testing agency (CSA International),
- The evaluation report number (ESR-1879) or ICC-ES PMG mark of conformity.

6.2 Components:

Manifolds and striker plates must bear the followings:

- Manufacturer’s name, trademark or symbol
- Part number
- Date code as described in ANSI LC-1/CSA 6.26
- Name or symbol of the testing agency (CSA International)
- The evaluation report number (ESR-1879) or ICC-ES PMG mark of conformity.

Each fitting of a piping system must bear the followings:

- Manufacturer’s name, trademark or symbol
- Fitting size code
- Date code as described in ANSI LC-1/CSA 6.26
- Name or symbol of the testing agency (CSA International)
- The evaluation report number (ESR-1879) or ICC-ES PMG mark of conformity.

Fitting part number shall be marked on the fitting carton.
